

Advanced Studies in Mathematics, Physics and Biology - Even the Humanities
By Karmische Karakofshiki

- I. Advanced ideas - Set theory or Einstein even Feynman and Bohr - now
 imagine their theses on everything

Sets are finally to be imagined - imagine one set is a complete society, now
correspond to it elements of sets and sets within sets now produce a contingent
development of life within sets, and produce biology.

- II. Imagination of Mathematics therefore

Mathematics is imagined, all imagined - but produce a sedimental logic.
